```

39) Suppose we have 6 students with roll no 1,2,3,4,5,6 respectively and now we want to calculate the average quiz marks of these students. The marks of the students are as follows:

| Roll | Quiz 1 | Quiz 2 | Quiz 3 | Quiz 4 |
|------|--------|--------|--------|--------|
| 1 | 12 | 11 | 10 | 8 |
| 2 | 13 | 10 | 11 | 9 |
| 3 | 14 | 13 | 9 | 20 |
| 4 | 11 | 15 | 8 | 14 |
| 5 | 9 | 12 | 15 | 16 |
| 6 | 11 | 15 | 13 | 13 |

Now using 2D array represent the quiz numbers of each students and calculate the average quiz marks (take only the best 3 quiz out of 4 quiz)for each of the students and print them accordingly.

```
#include<stdio.h>
```

```
int main()
```

```
{
```

```
    int student[6][4];
```

```
    int i,j,k,min,avg;
```

```
    for(i=0;i<6;i++){
```

```
        for(j=0;j<4;j++){
```

```
            printf("Enter roll %d of quiz %d    ",i+1,j+1);
```

```
            scanf("%d",&student[i][j]);
```

```
        }
```

```
        for(j=0;j<4;j++){
```

```
            printf("%d\t",student[i][j]);
```

```
        }
```

```
    }
```

```
    for(i=0;i<6;i++){
```

```
        min=student[i][0];
```

```
        k=0;
```

```
        for(j=0;j<4;j++){
```

```

        k=student[i][j]+k;

        if(min>student[i][j])

            min=student[i][j];

    }

    printf("Average of maximum 3 of roll %d=%d\n",i+1,(k-min)/3);

}

return 0;

}

```

```

String

40) Take two string input from user and swap them.

Sample input

Insert string 1: Bangla

Insert string 2: English

Sample output

After swapping

String 1: English

String 2: Bangla

```
#include<stdio.h>

#include<string.h>

#include<conio.h>

int main()

{

    char str1[25],str2[25],t[25];

    printf("\n Enter Two String :");

    scanf("%s %s",str1,str2);

    printf("\n Strings before swapping are:\n");

    printf("1.%s\n 2.%s\n",str1,str2);

    strcpy(t,str1);

    strcpy(str1,str2);

    strcpy(str2,t);

    printf("\n Strings after swapping are :\n");

    printf("1. %s\n 2.%s\n",str1,str2);

    return 0;

}
```

```
C:\Users\USER\Documents\A_40.exe

```

41) Take two string input from user and join them.

Sample input

Insert string 1: Bangla

Insert string 2: desh

Sample output

After joining

String : Bangladesh

```
#include<stdio.h>

#include<string.h>

#include<conio.h>

int main()

{

    char str1[25],str2[25],u[50];

    printf("\n Enter Two String :");

    scanf("%s %s",str1,str2);

    printf("After joining=%s",strcat(str1,str2));

    return 0;

}
```

42) Take a string input from user and reverse it without using `strrev()` function.

Sample input

Insert string : Bangla

Sample output

algnaB

```
#include<stdio.h>

#include<string.h>

int main()
{
    char str[100],temp;
    int i,j=0;
    printf("\nEnter the string :");
    gets(str);
    i=0;
    j=strlen(str)-1;
    while(i<j){
        temp=str[i];
        str[i]=str[j];
        str[j]=temp;
        i++;
        j--;
    }
    printf("\n Reverse string is :%s",str);
    return 0;
}
```

```

```

44) Take two input from user and check whether they are of same size.

Sample input

Insert string 1: Bangla
 Insert string 2: English
 Insert string 1: Red
 Insert string 2: Bad

Sample output

String 1 and String 2 are not of same size
 String 1 and String 2 are of same size

```
#include <stdio.h>
```

```
#include <string.h>
```

```

int main() {
    char a[100],b[100];

    printf("Enter a string two strings :");

```

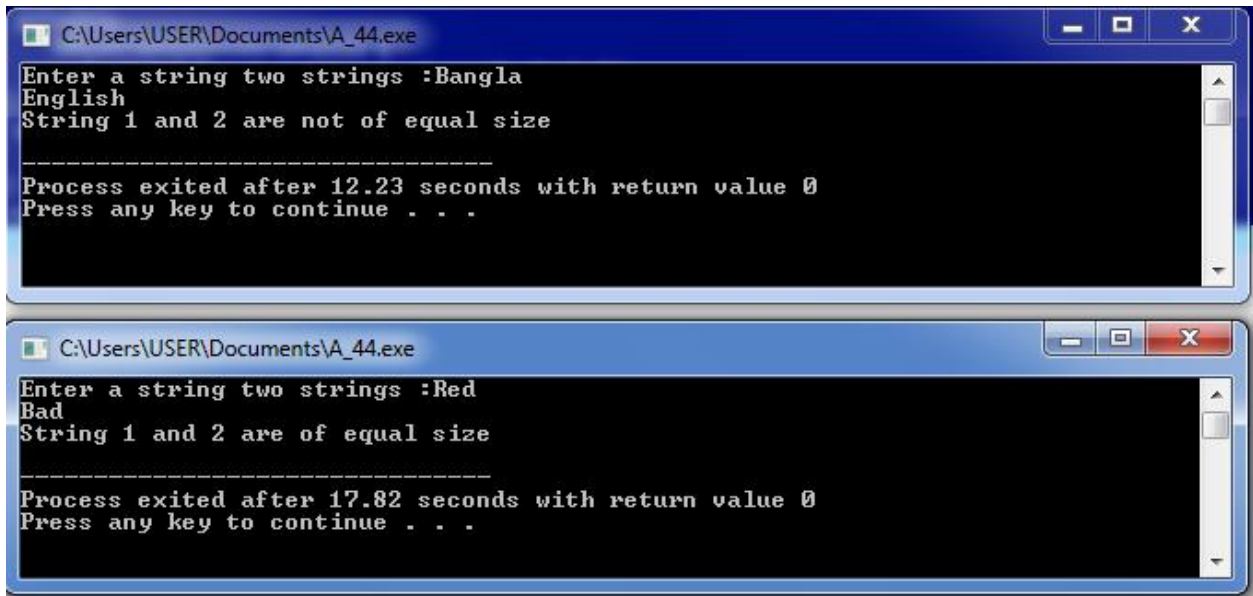

```

gets(a);
gets(b);

if(strlen(a)==strlen(b)) {
    printf("String 1 and 2 are of equal size\n");
}
else {
    printf("String 1 and 2 are not of equal size\n");
}

return 0;
}

```

45) Take N sentence as input and count the number of words in it. (N <=10)

Sample input

Sample output

N = 2

The quick brown fox jumps over the lazy dog

Number of word: 9

Fee fi fo fum I smell the blood of an Englishman

Number of word: 11

```
#include <stdio.h>
```

```
#define MAX_SIZE 100 // Maximum string size
```

```
int main()
{   int w,n;

    printf("How many sentence?");

    scanf("%d",&n);

    for(w=0;w<=n;w++){

        char str[MAX_SIZE];

        int i, words;

        /* Input string from user */
        printf("Enter any string: ");
        gets(str);

        i = 0;
        words = 1;

        /* Runs a loop till end of string */
        while(str[i] != '\0')
        {
            /* If the current character(str[i]) is white space */
